Description

Description:

Created by a physician, Dr. Brown's Natural Flow baby bottles feature a patented internal vent system that helps reduce colic, spit-up, burping and gas.

The positive pressure design allows babies to feed comfortably, because the vent system eliminates the air bubbles and vacuum.

Dr Browns offer a complete feeding system for happier babies; one that includes the only fully vented vacuum free feeding bottle.

Widely recognised by parents and health professionals as the most effective way of preventing colic symptoms caused by regular bottles and teats,

Dr Brown's Feeding System offers your baby the opportunity for a more comfortable feed.

Dedicated to promoting good health in mothers and their babies, Dr Brown's goal is to provide the best technology-driven products available.

Whether your baby is fed on expressed breast milk or infant formula, you will be amazed by the results.

All Dr. Browns Natural Flow teats are super soft and made of high grade silicone.

Each teat level provides a different flow rate.

Level One Nipples are ideal for Newborns
