Description

Description:

This corrective gel durably colours (3 to 5 days) depigmented areas. It can be used in conjunction with usual vitiligo treatments, in particular with phototherapy.

Viticolor gel combines:

- colouring agents that immediately colour the skin, thus highlighting the application area.
- pigmentation agents (DHA and Erythrulose), which give a more in-depth and durable colour. This colouring appears a few hours after application.

Use:

Apply Viticolor gel to the depigmented areas with the brush to ensure precise application. With the brush placed flat against the skin, start from the centre of the area, spread the product outwards to avoid any transition marks. Leave to dry.

If, 8 hours after application, the resulting colour is too pale, repeat the application. Subsequently, 1 to 2 applications per week will help maintain the desired colour. May stain clothing. Contains a brush applicator.
