Description

Description:

Advancis® Ginkgo Biloba + Vitamin B1 is a food supplement in rapid absorption tablets which contains an extract of Ginkgo biloba associated with Vitamin B1. This association represents an important aid to the improvement of cerebral and peripheral blood flow, preventing cerebral ageing and the improvement of cognitive function (i.e. memory and concentration). Advancis® Ginkgo Biloba + Vitamin B1 prevents tinnitus and dizziness, and relieves the feeling of heavy and sore legs and also cold hands and feet sensation.

Ingredients:

-Ginkgo biloba

Ginkgo biloba performs a significant action in the improvement of brain blood flow. Favors oxygenation, contributing to improve cognitive function (i.e. memory and concentration), helping prevent situations of dementia. It can also have a significant role in cases of tinnitus and dizziness. This plant also contributes to reinforce peripheral blood flow. Ginkgo biloba extract also has antioxidant properties, protecting the tissue from the damage caused by free radicals, which contributes to reinforce its action.

-Vitamin B1 (Thiamine)

Vitamin B1 is considered as an “anti-stress” vitamin, which contributes to the reinforcement of the immune system and to the increase of the organism’s resistance to stress. This supports the idea of a synergic action between Ginkgo biloba and Vitamin B1.

Benefits:

- Improves the general blood flow
- Brain and cognitive functioning
- Prevention of tinnitus and dizziness
- Relieves the feeling of heavy and sore legs
- Relieves the feeling of cold hands and feet

Use:

1 tablet a day, preferably at a main meal.
