Description

Description:

The AKILDIA® Multi-Protective Cream provides complete protection of the epidermis of the diabetic foot. It moisturizes intensely, strengthens its barrier function and rids it of its calluses. By stimulating the micro-circulation, it helps the foot to regain its sensitivity. Equipped with anti-bacterial and anti-fungal agents, the AKILDIA® Multi Protective Cream also prevents harmful external aggressions to the feet. Thanks to its special active ingredient (Glistin®), it protects cells from neurodegeneration.

Use:

Apply twice a day on the entire foot. Massage until complete penetration. Be sure to insist on areas that are subject to shoe friction. Do not use on skin with lesions or wounds.
