Description

Description:

Specific for weak and hair scalp thinning and male pattern baldness in its initial state, ideal as a complement to Crescina's treatment in ampoules!

Crescina hfsc 100% 200 man re-growth shampoo contains a specific formula of proper cleansing to those who have hair problems (hair loss, weak hair, thinning), helping to strengthen the stem of thin and brittle hair.

Personalized treatment for a problem that torments many men

Cleansing: Removes dirt, harmful waste and unpleasant hair and scalp residues.

Preparation: Combine the elements present in the formulation against thinning, in order to integrate them in promoting hair regrowth.

Balance: especially if used after chemicals treatments. Its function is to restore the hair structure to achieve the ideal condition.

A care specifically designed to be gentle, allowing more frequent washing, leaving the hair soft and lightweight with more volume.

Contains glycerol in order to protect the capillary surface and a silicone based conditioning agent to soften the hair. Adds volume to thin hair.
Palmitoyl myristyl serinate: a similar chemical to Ceramide 2 (a natural molecule found in the hair) which reinforces its density, power and brilliance.

Hydrolized k ratine: (in female formulation the concentration is twice the male's formulation), which merges into the hair and remains even after rinsing, helping to strengthen the hair shaft. Thanks to its very small size and low molecular weight, is naturally absorbed by the natural keratin hair. It also helps to strengthen the existing intercellular cement in the cuticle of the hair shaft.

Use:

Distribute the shampoo evenly on wet hair.

Massage gently until it forms a soft foam.

Leave to act for 2 minutes and then rinse thoroughly.

Repeat the process required.
