Description

Description:

Peptide Plus Cream is a light years-ahead moisture-rich cream powered by 7 multi-functional, clinically active peptides, plus four anti-aging complexes (moisturizing, protecting, brightening, and rejuvenating). Dramatically improves the most visible signs of aging, while strengthening skin's natural defenses, boosting collagen production and activating optimal hydration. A cutting edge vitamin C derivative helps diminish the appearance of discoloration, while preventing new dark spots from developing. This dream cream also firms skin and boosts elasticity, while reducing the look of even firmly entrenched lines and wrinkles. Significant moisturizers drench dryness, leaving skin renewed, redefined and radiant.

Use:

Twice daily, apply to clean dry skin on the face, neck and décolletage and delight in the satisfaction of taking a firm stand
