### Description

**Description:**

Acuaiss moisturising drops with hyaluronic acid lubricate and hydrate the eyes to provide immediate relief of the feeling of dry or itchy eyes.

Acuaiss moisturising drops have viscoelastic properties: when the product is applied to the eye, the tear has little tendency to break as it becomes resistant (viscous), however it becomes more fluid when we blink, a property due to the presence of sodium hyaluronate. Especially indicated in the following circumstances:

- Activities that require forcing our eyes, such as working with a computer, reading for a long time, watching television, long trips, tiredness or stress, in other words, activities that reduce the frequency of blinking.
- Air conditioned work places.
- Stuffy, contaminated atmospheres.
- Contact lens wearers.
- Circumstances where improving the quality of the tear film or fighting against the sensation of dry eye is recommended.

**Use:**

You should wash and rinse your hands well before handling the product.

Apply one or two drops in the affected eye when you feel the symptoms and blink repeatedly.

This lubricant solution can also be used for moisturising your contact lenses during use by applying a few drops before putting them in.

The solution can be used as many times a day as necessary.
