Description

**Description:**

These fruit-flavoured gummy bears contain a prebiotic ingredient called lactulose, which helps to gently boost levels of friendly bacteria inside little tummies and reduce levels of unfriendly bacteria.<sup>1</sup>

The prebiotic effect of Duphabears® means that they promote a healthy intestinal balance.<sup>2</sup> They can also help to enhance the absorption of calcium.<sup>2</sup>

So Duphabears® are an easy way to get some extra goodness into your child's diet (without them even noticing).

Lactulose is a prebiotic which remains undigested until it reaches the colon. Then, it is broken down and used as a nutrient by the friendly bacteria that naturally exist there.<sup>1</sup>

THE BENEFICIAL EFFECTS OF LACTULOSE INCLUDE:

- A reduction in the time required for digested food to pass through the intestines
- An increase in the number of beneficial microorganisms

- A decrease in the number of harmful microorganisms
- An increase in the absorption of calcium **Use:**

For a prebiotic effect:

children 3-6 years: 1 bear per day

children 7-14 days: 1 bear per day

adolescents and adults aged 15 years and above: two tablets per day

For stimulation of calcium absorption:

children 3-6 years: 1 bear per day

children 7-14 days: two bears per day

adolescents and adults aged 15 years and above: three bears per day

For laxative effect:

children 3-6 years: two bears per day

children 7-14 days: four bears per day

adolescents and adults aged 15 years and above: seven bears per day
