Description

Eucerin Even Pigment Perfector Day Cream SPF 30 contains Thiamidol, an effective and patented ingredient that acts at the root cause of hyperpigmentation by reducing melanin production. Moreover, it is clinically and dermatologically proven to reduce dark spots and prevent their re-appearance. First results are visible after two weeks.

With both UVA and UVB filters (SPF 30) Eucerin Even Pigment Perfector Day Cream SPF 30 offers effective protection from the sun. Thus, it reduces the chances of skin developing sun-induced pigment spots. Consequently, skin appears even and radiant.

Use:

Apply in the morning to a well-cleansed face, neck and décolleté

Gently massage into skin

Avoid contact with eyes

For best results, use in combination with Eucerin Even Pigment Perfector Night, Eucerin Even Pigment Perfector Dual Serum and Eucerin Even Pigment Perfector Spot Corrector

Apply each product once a day. Use a maximum of four applications of products containing Thiamidol per day.
