Description

Eucerin Even Pigment Perfector Night Cream contains Thiamidol, an effective and patented ingredient that acts at the root cause of hyperpigmentation by reducing melanin production. In addition, it is clinically and dermatologically proven to reduce dark spots and prevent their re-appearance. First results are visible after two weeks.

Eucerin Even Pigment Perfector Night Cream also contains Dexpanthenol – an active ingredient known to support skin regeneration overnight. Consequently, skin appears even and radiant.

Use:

Apply in the evening to a well-cleansed face, neck and décolleté

Gently massage into skin

Avoid contact with eyes

For optimal results, use in combination with Eucerin Even Pigment Perfector Day SPF 30, Eucerin Even Pigment Perfector Dual Serum and Eucerin Even Pigment Perfector Spot Corrector

Apply each product in the range once a day. Use a maximum of four applications of products containing Thiamidol per day.
