Description

Description:

Eucerin Sun Gel-Creme Oil Control Dry Touch SPF 50+ is a daily sunscreen with a very high sun protection factor specifically formulated for oily and acne-prone facial skin. It combines superior photo protection against sun-induced skin damage and an active solution to improve skin condition.

Firstly, its highly effective and photostable UVA/UVB filter system, which is compliant with Cosmetics Europe - The Personal Care Association (formerly Colipa), provides reliable protection.

Secondly, a combination of Licochalcone A and Glycyrrhentic Acid provides biological cell protection. Licochalcone A is a powerful, natural, anti-oxidant that protects the skin cells against damage caused by free radicals while Glycyrrhentic Acid protects DNA by supporting the skin's own DNA protection and repair mechanisms.

Finally, its specially developed Oil Control Technology addresses the specific needs of oily and acne-prone skin. The formula, with sebum-regulating L-Carnitine and a combination of three mattifying lipid-absorbing pigments, leaves an immediate and long lasting dry matt finish on the skin even in hot and humid climates.

Eucerin Sun Gel-Creme Oil Control Dry Touch SPF 50+ is non-comedogenic, free of perfume and parabens and an ideal make-up base.

Use:

Apply daily in the morning before sun exposure and reapply frequently to maintain the original protection.

Do not stay too long in the sun, even while using a sunscreen product. Over exposure to the sun is a serious health threat.
