Description

Description:

Anti-Age Transdermic Care for mature, sagging, loose skin. Glycine, Alanine and Proline molecules are supplied to the skin since these amino acids are contained in greater percentage in collagen, the main protein composing the dermis, responsible for skin density and compactness; Thiamine is a vitamin that, when lacking, can stop fibroblasts' role in collagen metabolism.

Use:

Apply morning and/or evening using upward movements until completely absorbed. To be used alone or after the Anti-Age Tightening Lifting Serum.
