Description

Description:

First Dermo-Cosmetic Plumping Gel with 8 Hyaluronic Acids (HA) for at-home use. For wrinkles and to boost cheekbones and lips.

Fillerina® dermo-cosmetic Replenishing Treatment for at-home use offers 8 types of HYALURONIC ACIDS with different molecular weights (from 400 Dalton to 2,000,000 Dalton) and structures which have a dermo-cosmetic filling action on the various skin layers. The active ingredient matrifull promotes trophism of the skin tissues and the reconstruction of the natural filling substances for a gradual and progressive plumping effect. Both Grades (4 and 5) Moisturize, Plump, and Smoothen the appearance of your skin. But when choosing a Grade consider the following. These are determined by skin type, not strength or age.

How To Use Fillerina:

Plus Dermo-Cosmetic Filler

The Fillerina® Replenishing Treatment must be used every day for 14 days, applying up to 2 ml of Replenishing Gel (Fillerina® 1) to the wrinkles, on the most marked microrelief and the areas that require particular plumping up (cheekbones, lips). The Replenishing Gel should be left to work for 10 minutes in order to allow the active principles to "plump up" the application areas. Each applicator is 1ml, so it can be drawn twice, measuring 2ml if needed. 2ml each day will last 14 days.

Then apply the Nourishing Film (Fillerina® 2), which provides a sufficient amount of moisturising and nourishing substances, and allows the replenishing gel application to be completed with maximum comfort for the skin of the face and neck.

Apply gel using this special applicator with truncated tip on areas with depression such as age wrinkles and expression furrows and on specific areas that require plumping (cheekbones, lips).

Perfect as a day cream or night cream, it leaves the skin bright and silky.

To facilitate the action of the product, it is advisable to drink two glasses of water before the application.
