### Description

Inofem Plus a dietary supplement supporting female reproductive health & helping to maintain a physiological well-being during the menstrual cycle.

A combination of myo-inositol and folic acid, which improves the metabolic and hormonal disorders, regulates menstrual cycles and improves fertility. How does it work? Myo-inositol is the fundamental constituent of cell membranes and is a component of compounds (second messengers). Essential to the signaling of different molecules such as insulin. Furthermore, it has been noted that the content of myo-inositol in follicular fluid (the fluid that surrounds the oocyte before ovulation) is critical for proper oocyte development. In fact, the presence of high levels of inositol in the follicular fluid is a marker of good oocyte quality.

Folic acid is essential for cell division and proliferation and its contribution is very important for women seeking pregnancy. Furthermore, it helps to reduce homocysteine levels that are elevated in some women, and are a marker of cardiovascular risk.

### How to use :

Take 1 sachet of Inofem Plus once or twice a day dissolved in a glass of water or as prescribed by your healthcare provider.
