Description

Description:

Benefits of Magic Foam

- Bioactive Calcis fosters enamel formation of baby teeth and saturates enamel with calcium.
- A complex of unique milk enzymes (lactoferrin, lactoperoxidase and glucose oxidase) provides protection against bacteria, promotes healthy

gums and contributes to oral immunity formation.

- The innovative LUCTATOL system (a combination of liquorice extract and milk enzymes) actively defends against Streptococcus mutans bacteria, reducing the risk of tooth decay and dental plaque build-up by 96%*.
- Dipotassium glycyrrhizinate and creatine are natural anti-inflammatory components which relieve gums during painful teething.
- The foam is perfect for children who suffer from fluoride-related contraindications.

Ideal to put in your child's school bag

The vulnerable enamel of children's teeth requires special protection. After every meal or drink, especially with high sugar content, acids attack the enamel which causes tooth decay.

Active components

- Liquorice extract
- Arginine
- Calcis
- Lactoperoxidase, lactoferrin, glucose oxidase
- Dipotassium glycyrrhizinate
- Creatine

Natural ingredients

- Licorice
- Altai Sea Buckthorn
