Description

Description:

This is a match made in dental heaven! We've merged the natural antibacterial and whitening properties of gold and bamboo charcoal to create a toothbrush your teeth will thank you for!

Here is what makes Nano-b Charcoal & Gold so special:

Gold – Half of the Nano-b Charcoal & Gold bristles are impregnated with genuine gold particles to safeguard your toothbrush from bacteria. This keeps your toothbrush cleaner and safer, which is what you want from a dental tool you put in your mouth every day.

Charcoal – The other half of the bristles are impregnated with bamboo charcoal particles. Known for its natural whitening and toxins absorbing qualities, charcoal helps your teeth stay cleaner and whiter.

Double bristle structure – A combination of long, ultra-thin bristles and short, oval ones ensures you remove plaque much more effectively. The long, fine bristles imitate flossing action and clean plaque in hard-to- reach places like between your teeth and under the gumline, while the short ones take care of the big surfaces of your teeth. Nano-b virtually combines brushing and flossing in one.

Rounded-edged bristle tips – Scientifically rounded bristle tips protect the soft tissue of your mouth from scratches and cuts. This makes Nano-b ideal for people suffering from sensitive or bleeding gums.

Smaller head size – A toothbrush should be able to effectively clean all of your teeth, not just the easy-to- reach ones. Hence, we've made the head of our brush smaller and nimble enough to reach and clean your back teeth just as easily.

Beautiful crystal design – Nano-b brushes are clean, smooth and transparent. They come in a range of beautiful crystal colors which makes brushing a much more pleasant experience.

Travel case included – Each Nano-b toothbrush comes in its own handy travel case, ideal for storage and travel. Now it's easy to carry your toothbrush with you whenever you want to.

Lasts up to 6 months - Nano-b bristles are more durable and fray much less than standard brushes. Combined with its antibacterial features, this means you can safely use your Nano-b brush for up to 6 months, before getting a new one.
