Description

Description:

PCA Skin Pigment Bar (formerly Pigment Bar - pHaze 13) is the cleansing companion in PCA's pigment control program, designed to enhance and maintain the complexion-refining results produced by its sister products. Exfoliating kojic, azelaic and tannic acids control breakouts and diminish hyperpigmentation while cleansing the skin of dirt and debris. Aloe vera, witch hazel and rosewood extracts calm inflammation for a glowing complexion.

Directions:

Moisten enclosed sponge and work up a creamy lather. Cleanse affected area, allowing lather to remain on skin approximately 2 minutes. Rinse with warm water and pat dry. Follow with appropriate PCA Skin products as directed. For pigment control maintenance, use two to three times weekly.
