### Description

**Description:**

Sesderma Sebovalis is a very powerful gel that acts immediately on facial seborrhea. It is suitable for normal, greasy, dry or mixed skins, even for the most delicate skins. This treatment allows a considerable reduction of redness, flaking and pruritus of the face. Pruritus is an uncomfortable tingling or irritation of the skin that causes the desire to scratch the affected area. It also removes irritations from other areas such as thorax, ears and back. It is a very suitable product in complicated shaves. This gel contains the proper pH that prevents any irritation in the skin. Contains a light texture that does not grease the skin, without oils and that spreads and is absorbed quickly. Its regular use allows to control the excess sebaceous secretion of the skin.

**Use:**

Apply to the entire face or affected areas by lightly rubbing the fingertips until completely absorbed. It can be applied in the morning, at night or as often as required. As a shaver preparer, apply the previous night to it.
