Description

Description:

Walker boots have been designed to protect your foot after an injury or surgery. You'll often suffer from swelling and oedema in the area, which can make the boot uncomfortably tight. The Thuasne XLR8 Pneumatic Walker Boot has a rigid shell to protect your foot, as well as inflatable air cells to provide you with a precise anatomical fit even when you're suffering from oedema.

Indication:

- Fracture of the foot
- Fracture of the front of the foot
- Ligament and tendon-related trauma/injury
- Pre- or post-operative ankle stabilisation
- Severe sprains
- Ski injuries

Features:

- Full shell pneumatic walking boot
- Rigid shell contains two integrated independent air cells
- Provides a precise anatomical fit
- Air cells are quick and easy to inflate
- Cells adjust pressure to the oedema once boot is in place
- Liner of the XLR8 is removable and washable
- Adjustable toe guard helps protect front of the foot
- Curved, anti-skid sole helps with natural walking
- Boot is available in long and short version

Size indication:

The XLR8 is available in five different sizes. To find your perfect fit, simply use your UK shoe size

The Walker Boot is also available in either a long or a short version. The short version is better for forefoot injuries or post-operative use.
